Project Highlights

• Connection between J/Z and A/C Stations reopened in early August 2012

• Dey Street Headhouse entrance to open October 2012

• Reconstructed A/C Mezzanine open to passengers

• Corbin Building scaffolding to begin coming down in October 2012
Construction Update
Dey Street Entrance – Street Level
Dey Street Entrance - Elevator
Transit Center Building – Curtain Wall
Transit Center Building – Curtain Wall
Transit Center Building – Oculus and Parasols
Corbin Building Scaffolding

- Scaffolding to be dismantled in sections
- First section to come down late October 2012
- Inspectors to be on site to conduct noise monitoring
Fulton Center LEED Elements

- Over 30% potable water use reduction through water efficient fixtures
- Over 15% energy demand reduction compared to a baseline building of similar type
- Increased daylighting and views
- Reduced urban heat island effect through reflective roof surfaces
- Over 80% of construction waste diverted from landfills
- A reduction in the embodied environmental impact of materials – greater than 10% of materials are sourced locally and are made of recycled content
- Reduction of transport related carbon emissions - over 400 transit trips per day
Sidewalk and Street Staging Areas – October 2012

NOTE: DDC Broadway watermain and sewer work expected to be released for bid by Spring 2013.
Sidewalk and Street Staging Areas – 2013

Note: Staging by others, if any, to be included at a later date when limits can be better identified.
